

## Capabilities

- Close Machining Tolerance
- Assembly Construction Canal & Custom Assembly
- Grinding Full Sidewall Blocks
- Radial Arm Diamond Drill
- Tysaman Saws
- Compound Refractory Shaping
- Inventory

**Emergency  
Service 24/7**

**724-822-3945**

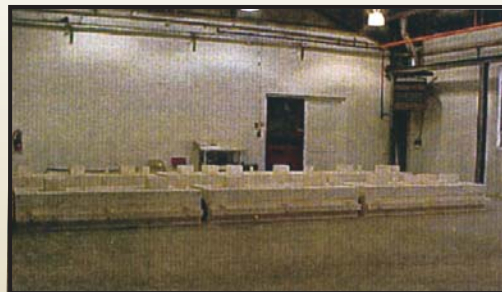

## Inventory

Surplus emergency stock available to meet your needs.

## Assembly

Our facility with consigned inventory capability now offers a 1,700 square foot assembly area.

This gives you the ability to have your project preassembled and inspected prior to installation.

*"Meeting your requirements  
on time, every time."*

## Cylindrical Grinding

- Turning both inside and outside diameters
- Grooves and Ship Laps

Dedicated to serving the glass, steel, aluminum and refractory industries.

We offer refractory grinding, sawing, drilling, shaping, and construction of custom assemblies. We specialize in precision machining of standard and custom shapes.

**RMS, Inc** has over 150 years of combined experience and knowledge in the refractory industry. We understand the requirements of our customers and combine **Quality** with **Service**.

We put our customers first. We provide **24 hour Emergency Service**. We inventory glass tank material for quick response time.

## Cincinnati Bickford Drill

RMS has a Cincinnati Bickford radial arm drill to allow complete in-house fabrication. We have an agreement with the diamond drill bits supplier to secure immediate replacement bits.

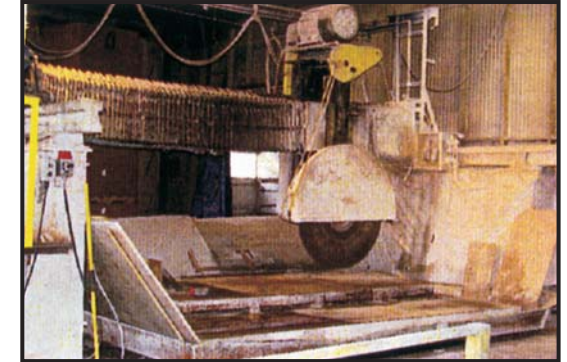

## Blanchard Grinders

RMS has 4 Blanchard Grinders of various sizes allowing us to perform a multitude of projects simultaneously. Grinding surfaces of 36", 48", 60", and 84" allows us to match our Blanchard to your machining requirements.

## Tysaman Saws

RMS has two Tysaman saws that prove their effectiveness and flexibility ranging from 20" to 48" blade, in the refractory machining process, providing consistent precision sawing of materials.

## REFRACTORY

- **Assembly Services** - forehearths, throat overcoats, ports, arches, tin bath modules
- **Inventory Rework** - RMS has worked with many companies to reduce their refractory inventory by machining current inventory items for use in upcoming rebuilds rather than purchasing new refractory.
- **Canal & Lip / Spout Assemblies** - RMS provides the steel and substructure refractory and can provide the glass contact material from the fused cast supplier of your choice.
